Approved for public release;
distribution unlimited.

- Background
- CBME Database Features
- CBME Database Challenges
- CBME Database Future
- Database Previews
- Demonstration
- Conclusion
- Questions

- CBME database was developed in response to Public Law 108-375 to create a Chemical and Biological Contamination Survivability (CBCS) policy and a centralized database.
- Development performed under guidance of an Executive Steering Committee (ESC) chaired by the Army Research Laboratory Survivability Lethality Analysis Directorate (ARL/SLAD)
- Joint multi-service and agency representation on ESC directed development and database architecture

- Database structure and objective data content defined by “Materials and Properties Matrix” from CBME Materials Sub-Group
- ARL/SLAD collaborated with the Chemical Biological Radiological and Nuclear Defense Information Analysis Center (CBRNIAC, Battelle) CBME database development effort
- CBME database maintenance resourced by DATSD (CBD&CDP) as per DoDI 3150.09 through PAIO, ARL/SLAD and CBRNIAC

- The CBME database contains a wealth of information on the effects of chemical agents, biological agents, decontaminants and simulants, for materials used in defense critical systems
- Material effects data addresses hardness and decontaminability issues in support of design, test, and evaluation of DoD systems
- This dedicated source for material effects data can significantly reduce the cost and risk associated with fielding Chemical and Biological (CB) survivable systems
- Data is available to qualified government and contractor personnel via web based, user friendly easily accessible site

- Extensive data repository includes material effects on over 560 materials
- Database content has been extracted from legacy databases and current literature (data identified through searches and reviewed for relevance)
 - Chemical Defense Material Database
 - Air Force Material Effects Database
 - Edgewood Chemical Biological Center
 - West Desert Test Center
 - Naval Surface Weapons Center
 - Defense Technical Information Center
 - CBRNIAC

- Multiple query systems are available to quickly identify data of interest
- Database query results can to be exported in Excel format to user's desktop for analysis
- Most source documents are available for download and several additional CBR Contamination Survivability reference documents are also available
- Literature searches are ongoing, and the CBME is continuously updated with new data

- Data voids exist, some content is dated
- Current data distribution level is Government and Government Contractor only
- New CBME Database site will be at the Government level only
 - This will broaden the field of current, relevant, and available data from existing search sources
 - Some previous documents excluded due to distribution restrictions will now be available

US ARMY

UNCLASSIFIED

CBME's Future

- Value of CBME depends on new test data
- Government agencies and contractors need to ensure their material effects test data is sent to DTIC for inclusion
- Sharing your data is a win win solution for the entire community

CBME Login & Register for an Account

The screenshot shows a web browser window with a single tab titled 'Login'. The page header features the 'CBME' logo in large blue letters and the 'Army Research Laboratory' logo in yellow and blue. Below the header, the text 'Chemical-Biological Material Effects Database' is displayed. The main content area has a blue bar with the text 'Enter your login and password'. Below this, there are two input fields: 'Login:' and 'Password:'. To the right of these fields, under the heading 'Options:', there are four links: 'Register for an account', 'Forgot your password?', 'Login Help', and 'Contact Us'. A 'Login' button is positioned below the password field. At the bottom of the page, the text 'Army Research Laboratory' is followed by 'Science, Technology & Analysis for Full-Spectrum Operations', '© Copyright 2006 • All rights reserved.', and a link to 'Privacy & Security Notice'.

Registration

Registration Notice

To ensure the privacy of our users and the security of our data, we are using a multi-step registration process for this system and all sites which are contained in it. Because this process will take some time, please be patient. The steps to register are the following:

1. Enter and submit basic information, such as name, business/organization name and address, work reference information, phone numbers, fax numbers, e-mail address(es), and (optionally) shipping and billing addresses. After submitting the required basic information, the system will send an e-mail to the business e-mail address that you enter. You must read and respond to that e-mail within three (3) calendar days to validate your account or we will delete the account.
2. When you respond to validate your account, you will then be given the option to choose the sites that you wish to access and supply any additional required/optional information for the chosen sites. Once you have submitted the required information, the system will send a notice of your application to the site administrator of each site you have chosen to access.
3. After receiving the notice that you have applied for access to a site, the site's administrator will review your basic and site-specific information and approve/disapprove your access to the site. This decision will be returned to you in an e-mail, one for each site to which you applied for access. If approved, you will be able to access the site once you have received the return e-mail from the site administrator. Please note that some site administrators may not accept accounts with business e-mails from juno.com, hotmail.com, or yahoo.com. Please also note that if you request access to many sites/communities in the system, you will receive many e-mails.

We take privacy and security seriously for this system. If you want to view our Privacy and Security Policy for this system (which applies to all sites in this system), please [click here](#).

If you would like a detailed list of basic data required for registration along with the additional data needed for access to the CBRNIAC Database, please [click here](#).

☐ Please check this box to show that you have read this registration notice.

Chemical-Biological Material Effects Database

Logged in as [chriscocelli] [Log Out](#)

The CBME Database is sponsored by the Department of Defense Chemical and Biological Defense Program under the oversight of the Deputy Assistant to the Secretary of Defense for Chemical and Biological Defense and Chemical Demilitarization.

The Database has been developed to help designers and developers with the task of incorporating Nuclear, Biological, and Chemical Contamination Survivability (NBCCS) into system design and development. The database system contains data from technical reports on over 550 materials that have been exposed to CW agents. The database details the effects of CW agents and decontaminants on specific properties of materials. There is an extensive ongoing review of test data and documentation not currently included in the database, and additional extracted data will be added in future updates.

What's New on CBME

The nomination process has been updated but not activated on-line. Following final approval of the nomination process the CBME database nomination process will be activated.

Try It Out: Since there will be a lead time before the Nomination process has been approved and activated, the development team has left a single testing Nomination in the database so that users may try-out the Endorsement process. It can be found quickly by going to Browse and then selecting 'Current Nominations' in the drop-down list. The Endorsements are located on the last tab.

Infrastructure Updates: Implementation of the Nominations and Endorsements functionality required extensive updates to the CBME database and User Authentication services. This work will be most noticeable when reviewing the details of a Nomination.

Data Updates: Data from 12 documents were added to the database. This resulted in 7 new materials, 8 new challenges, and 1405 new test entries. New test entry total is 51,387.

CBME Metrics

| Category | Number |
|-------------------------|--------|
| Materials in Database: | 564 |
| Challenges in Database: | 272 |
| Test Entries: | 51387 |

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

UNCLASSIFIED

Advanced Search Feature

Search

The powerful tools in the advanced search allow you to build complex searches by connecting new and historical statements together. Statements can focus your search to materials, challenges, and properties. Stringing statements together into one query can target your search to test entries that are extremely focused towards a specific goal. If more general information is desired, fewer statements can be used or the Quick Search feature can be employed.

Steps for building a query:

- 1) Select the taxonomy from the drop-down box.
- 2) Enter a word, a phrase, or a word with a '*' as a wildcard. (click Legal Values to view available search terms)
- 3) Press the Add button to add the fragment to the Current Query box.
- 4) Preview search results by clicking the Preview button, or click Search button to view the list of Test Entries that match this query.

You can continue to build up more complex searches by adding new fragments (repeat steps 1-3). Select the appropriate logical operator (AND, OR) to join the new fragment to the Current Query. You can also combine results of previous searches by using the Recent Queries table. Click on the query # to post it to the Current Query box. The currently selected operator will be added to any search string already in that box.

Clicking the Clear button will empty the Current Query box and reset the Query Builder to defaults.

Click the Delete link to remove any individual query from the Recent Queries list.

Click the View link to show the list of Test Entries that match this query.

TEST DESCRIPTION

Test Description

Specimen Prep Method:

Specimen Type:

SEE MATERIAL SPECIFICATION TABLE

Specimen Dimensions:

SAMPLES WERE EITHER 1 x 2 cm OR 1 x 2 INCH SECTIONS.

Specimen Count:

SEE TEST PROCEDURE SECTION. THIS FIELD WAS NOT AVAILABLE IN ORIGINAL DATABASE

Specimen Pre-Conditions:

SAMPLES WERE RINSED WITH METHANOL THEN BLOTTED DRY.

Test Equipment:

SMALL SECTIONS WERE TESTED IN GLASS TEST TUBES; LARGE PLASTIC SECTIONS WERE TEST

Test Procedure:

(U): SMALL PLASTICS SECTIONS WERE IMMersed IN 2 ML TEST SOLVENT; LARGE PLASTIC SEC
TEST TEMPERATURES: 23, 35 AND 50 C. EXPOSURE PERIODS: 1, 6 AND 24 HRS. PROPERTIES TE
MATERIAL. NUMBER OF SAMPLES:3 (BLANKS NS). TEST TUBES WERE PLACED IN THERMOSTATIC
ROUND-BOTTOM FLASKS WERE PLACED IN A THERMOSTATICALLY CONTROLLED CIRCULATING V
AND TEST PLASTICS WERE REM

Exposure State:

LIQUID

Exposure Conditions:

IMMERSED

Exposure Temperature:

23.00

Exposure Time:

24.00

Exposure Remarks:

Material - As Tested

Material Name:

PVC

Material Trade Name:

POLYVINYLCHLORIDE

Material Treatments:

Material Form:
